

Model Aircraft Precision Aerobatics by Peter Jenkins

This is the Second Edition of this book which has been re-written to describe how to fly the Great Britain Radio Control Aerobatic Association (GBRCAA) Clubman Schedule for 2022 onwards. The book also now describes how to fly the GBRCAA Intermediate Schedule as some pilots start competition flying with this schedule. Peter goes on to say:

This book is a guide both for beginners as well as improvers to model aircraft precision aerobatics, or F3A, competition focused on the UK. However, it is just as relevant anywhere else in the world as the issue of how to control an aerobatic model aircraft is not limited to a single geography! If you are not interested in entering competitions, this book will bring you some of the knowledge and techniques that you would only pick up by attending them. If you are sufficiently disciplined in your flying, there is no reason why you should not reach a good aerobatic standard after following the advice and guidance contained in this book.

The book is available world-wide via Amazon – just type in Model Aircraft Precision Aerobatics into the Amazon search box in your area. In the UK, the book costs £24.99 in paperback or £8.99 in Kindle form and can be purchased from Amazon on this link:

<https://www.amazon.co.uk/dp/B09QN72NVK>. GBRCAA members can buy the book from me at a discounted price of £18.99 including 1st class post and packing – just send me a PM. Some of the reviews of the book on Amazon are below:

If you want to fly well read this, if you want to fly really well read it twice. Well written and a great balance between theory and practical advice. If you want to fly RC aerobatics better or start your journey into competitions this is a must read. (UK customer)

The new bible for precision aircraft flying - Well done introduction to precision flying. Great first book that will take you to Advance-class AMA flying. (US customer)

Educational tool to improve your RC flying skills - Informative. Accurate. Much knowledge in a compact logical form. Learning RC acrobatics? This is for you. (US customer)

Clear and precise guide to RC plane aerobatics and setup Excellent guide for F3A and precision aerobatics but also very good for just understanding how to get the best out of your model planes. It's very well written with good clear descriptions and diagrams of the manoeuvres and is easy to follow. Excellent addition to your library for anyone interested in understanding and improving their aerobatic skills. (UK customer)

This is the book I would like to have had when I took up aerobatics and first entered competitions. If like me, you have wanted to take up precision aerobatics but couldn't find any resources to help you, this is the book for you.

The book covers the basics of starting aerobatic flying, from when you have just gone solo, to helping you to get ready to take up the challenge of flying in aerobatic competitions.

The book contains advice on how to set up your aircraft covering for example: centre of gravity position; engine/motor thrust lines; and control throws. It then takes you through the basics of aerobatic manoeuvres with both diagrams and words. Once over this initial phase, you will get much more detail about set up and trimming as well as how to fly large smooth manoeuvres ultimately taking account of the impact of the wind on the flight.

The book contains a chapter on mini training schedules that allow you to build up your skills before describing how to fly the entry level aerobatic competition schedule used in Great Britain as well as the Intermediate Schedule. Finally, I have included references to how you can access the resources to help you to progress from a practical flying viewpoint.

The book can also be purchased from Bondaero also at a discount to the Amazon price.

Peter Jenkins has been flying model aircraft since he was a teenager but only entered aerobatic competitions in 2011. He has organised and run a number of introductory courses to coach newcomers to start and others to improve their aerobatics. He continues to organise aerobatic competitions for the GB National League and to act as Contest Director. He is a qualified instructor and examiner for the UK's largest model flying association, the BMFA of which he was a Director for 6 years. He has also held a private pilots' licence and flew and instructed on full size gliders for many years. Peter currently flies the FAI(P) schedule in domestic competitions in GB.

Thank you, Peter, we have already had several complimentary comments from your readers and I know you have received many comments from around the world.
